### PROJECT SUMMARY

The project has the goal to provide knowledge and skills on the whole Project Cycle Management of an Erasmus+ Project, giving to the Youth Workers the possibility to create and submit high quality projects that will have a higher chance to be approved and a bigger impact on our communities.

Furthemore the said young people that will be trained on how to undertake logistics of a proposed project that might have a very high degree of approval is by itself is a tool not only for his network of friends/associates/community .Such projects tend to allow for a certain liberation from a monotony of less opportunities not only for the individual but also insofar as hopes and prospects are concerned. In a sense the value of writing a project has a substantial value as in and of itself as a goal, but the main feature that underlies any and all such projects is primarily the creation of hope and the creation of an opportunity to widen one's horizons and skills.

And here where the European values and opportunities lie, because it affect the base for creating a wider network. It offers mobility ,and it offers ways for individuals/localities to get integrated and interconnected with other people from allover the Europe.

The general objectives of the project are:

- to provide YW with knowledges and skills on how to write an Erasmus+ Project
- to provide YW with knowledges and skills on how to use non-formal education
- to increase in the participant the positive perception of the values of European Union
- to create a net of partners working on submitting at least 3 E+ projects
